

# IPM Decisions Platform

## For farmers and advisors in Europe

The IPM Decisions platform provides access to a range of IPM DSS (Decision Support Systems) across Europe. Registered farmers and advisors will be able to obtain customised DSS outputs accessible through a **dashboard** and **alert system**. The platform provides access to DSS's and weather data across Europe. Once you have registered your farm, you can access the dashboard with specific results for your crop, region and weather forecast.

## Platform functionality

The IPM Decisions Platform is an open access “one-stop shop” for decision support in integrated pest management, with a quick and easy process to set it up:

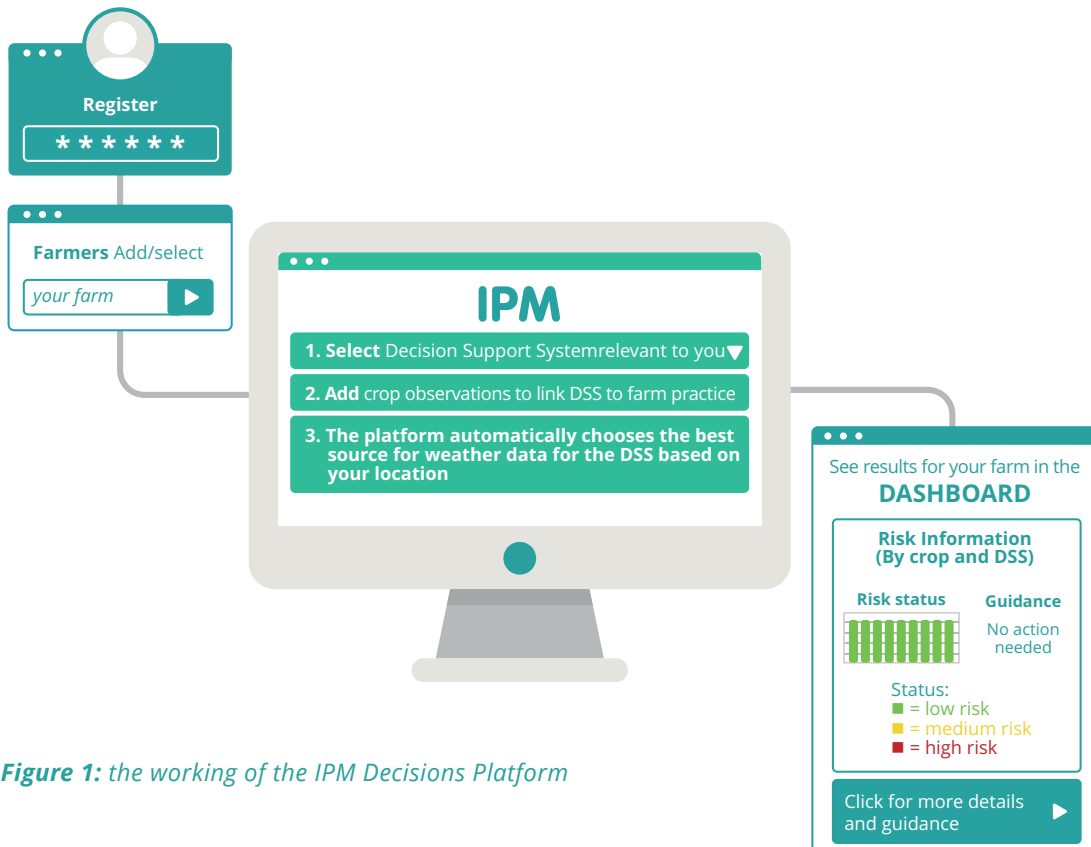

Figure 1: the working of the IPM Decisions Platform

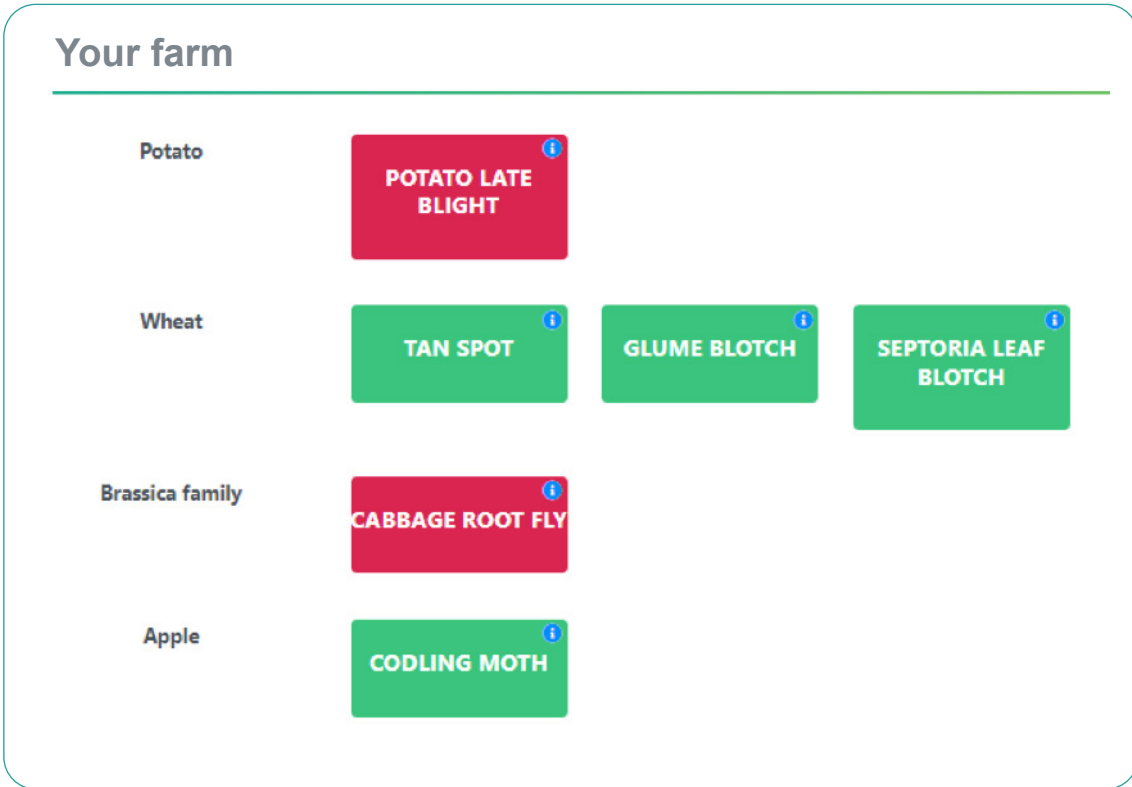

Figure 2: an example of detailed output (and alerts!) on the dashboard
